

# Information Technology System

The important development of the information technology system in the year 2000 are described as follows:

1. Implement Y2K solution program concerning the operation and command programs, and the systems that are responsible for drugs prevention and suppression activities, in order to support the anti-narcotics operations of all concerned agencies.
2. Formulate Narcotics Control Information Master Plan (2000-2002). This plan is served as a framework and guidelines to develop and integrate narcotics control information and technology through out the country to have the same efficient standard, which will lead to the effective national narcotics control in the future.
3. Expand ONCB computer network to Pattaya, Samui, and Aranyaprated checking point, 191 Intelligence Division, Metropolitan Police Bureau and the joint unit of ONCB and Songkla Royal Thai Army.
4. Install new mainframe computer (Amdhal, GS 422) in order to enhance the efficiency of anti-narcotics data processing (speed 64 MIPS)
5. Install IBM RAMAC hard disk, HITACHI FREEDOM 7700 E and hard disk managing program, in order to increase the capacity of data storage, processed from both mainframe system and LAN system.
6. Disseminate narcotics information on the Internet by developing ONCB website, named [WWW.ONCB.CO.TH](http://WWW.ONCB.CO.TH)

## **Policy and Trend in the Year 2000-2001**

1. To manage and compile national and international data on drugs control technology information.
2. To analyze and develop information system and technology work for ONCB and other concerned agency.
3. To develop information network of all anti-narcotics agencies to cover nationwide areas and to link and exchange information network with other countries.
4. To direct and control the security system and the information services of drugs prevention and suppression of

ONCB, in order to be efficient and keep up with the changing situation.

5. To research and develop information technology to keep up with the evolution for responding the rapid change of information need.
6. To formulate Narcotics Control Technology Information System Master Plan (2002-2004)

### **Overview**

Develop information and database system to be in line with current evolution and unify the information from all agencies, in order to enhance the efficiency of narcotics control work.
